What is this study about?
We are studying how children’s math and number skills develop as they grow. We will ask families to come for 2 visits. Families who live near Nashville are the best fit for this study.

During these visits, we will ask children in grades K-3 to:
- answer questions and take puzzle-like tests
- play some games on a computer

During these visits, we will ask parents to:
- answer questions about your family
- answer questions about your child’s experiences and behaviors

During these visits, we will provide a small gift for your child (~$10 value) per visit, plus mileage compensation
