How do babies learn about the world around them? We hope to find out how babies learn from what they do and from watching what other people do with objects.

Vanderbilt Infant Learning Lab

We invite parents and their infants to come to our play room while we videotape your baby's play with toys.

We strive to make your visit to our lab as fun and interesting for you and your baby as we can. We have reserved parking spots on campus that you can use during your visit and someone from our lab will meet you there and walk you in to the lab.

Infant Learning Lab

Help us learn more about how children with Down syndrome interact with objects!

We invite parents and their children with Down syndrome age 2 months to 4 years to come to our playroom for 1 to 3 visits while we videotape your child playing with toys.

We will give you $25 and a toy at completion.
