Date of IRB Approval: 3-23-2010
We are always looking for research volunteers. Currently we are conducting several research projects on memory, attention, creativity and personality. Most of our studies are conducted in our lab, which is located in room 213 in Wilson Hall. Some of our experiments are conducted with an eye tracker that enables us to monitor your eye positions while you perceive or remember various visual stimuli.

We are interested in the following research topics:

- **Creativity**
- **Memory and attention**
- **Brain imaging studies**

**Our Research**

**Creativity**

We are interested in learning about the relationship between creative thought and personality. Creativity varies from person to person, so we utilize various questionnaires to find out what factors influence creativity in different people.

**Memory and Cognition**

We currently have several experiments that assess memory and attention. These tasks are related to how well people remember things, and how well people can pay attention to different tasks.

**Imaging Studies**

We are also interested in brain imaging, which helps us learn more about the processes of creativity and memory and attention. If you participate in these studies, we will take pictures of your brain!

**What to expect when you come to the lab**

You will read about the experiments, and decide if you want to participate.

You will be given an interview to help us understand your current symptoms.

You will complete one or more experiments, with the help of a research assistant!

If there are no more experiments for you to complete, we will pay you for the time you spent at the lab at a rate of $20 per hour.
