

Attention Deficit Hyperactivity Disorder

TIPS AND RESOURCES FOR FAMILIES

What is ADHD?

Attention deficit hyperactivity disorder (ADHD) occurs in 8% to 10% of school-age children. Primary characteristics include challenges with staying focused and paying attention, controlling behavior, and managing activity level. ADHD is about 3 times more common in boys than in girls and occurs across all racial, ethnic, and social groups.

According to the Centers for Disease Control and Prevention (CDC), a child with ADHD might:

- have a hard time paying attention
- daydream a lot
- not seem to listen
- be easily distracted from schoolwork or play
- forget things
- be in constant motion or unable to stay seated
- squirm or fidget
- talk too much
- not be able to play quietly
- act and speak without thinking
- have trouble taking turns
- interrupt others

What causes ADHD?

Currently, the cause of ADHD is unknown. However, there is strong evidence for both genetic and environmental factors. Scientists continue to explore promising areas related to brain function and activity. Research has shown increased risk of ADHD related to smoking during pregnancy, low birth weight, and prematurity.

What should I do if I think my child might have ADHD?

A diagnosis of ADHD should come from a licensed professional, such as a pediatrician, child psychologist, or pediatric neurologist. There is no single test for ADHD. A diagnosis will come after a medical exam, ruling out other issues, and often after collecting first-hand observations from parents, teachers, and others.

Can ADHD be treated?

While there is no cure for ADHD, there are effective strategies that may be put in place to manage symptoms. Research conducted by the National Institute of Mental Health and the U.S. Department of Education's Office of Special Education Programs has recognized the effectiveness of four core interventions:

1. Child, parent, and teacher education about ADHD
2. Medication
3. Behavioral therapy
4. Other environmental supports, including an appropriate school program

There are many strategies available and there is not a one-size-fits-all approach. Discuss individualized options with your child's pediatrician and reevaluate treatment plans and make changes when needed.

How will having a child with ADHD affect my family?

Most children with ADHD will not outgrow it and therefore will need to manage their symptoms even as adults. Children with ADHD are often blamed for their behavior, when it may be beyond their control. Remember this and place patience, compassion, and self-care in your parenting toolbox. Responding in positive and supportive ways will help your child to reach his or her full potential.

Your child may be eligible for special education services and may benefit from additional educational supports. Remember that you will be your child's most important advocate, so familiarize yourself with legal and educational rights.

Attention Deficit Hyperactivity Disorder

RESOURCES

Who We Are and Who We Serve

The **Vanderbilt Kennedy Center (VKC)** works with and for people with disabilities and their family members, service providers and advocates, researchers and policy makers. It is among only a few centers nationwide to be a University Center for Excellence in Developmental Disabilities, a *Eunice Kennedy Shriver* Intellectual and Developmental Disabilities Research Center, and a Leadership Education in Neurodevelopmental and Related Disabilities Training Program. The following are some of the ways the Center's programs and staff can assist families, educators, and other service providers.

Tennessee Disability Pathfinder

Tennessee Disability Pathfinder is a free statewide phone, web, and print referral service in English and Spanish. It connects the Tennessee disability community with service providers and resources. Its website database has over 3,000 agencies searchable by Tennessee county and service. Pathfinder is a project of the VKC, TN Council on Developmental Disabilities, TN Department of Health, and the TN Department of Intellectual and Developmental Disabilities. Contact www.familypathfinder.org, (615) 322-8529, toll-free (800) 640-4636.

Vanderbilt Kennedy Reading Clinic

This clinic provides intensive, evidence-based instruction and assessment for students in kindergarten through middle school. Contact readingclinic@vumc.org or (615) 936-5123.

Vanderbilt Kennedy Learning Assessment Clinic

Multidisciplinary specialists provide academic assessment of students, 5-25 years, to identify learning strengths and challenges and to recommend strategies to improve academic learning. Contact LAC@vumc.org or (615) 936-5118.

Vanderbilt Center for Child Development

The Center for Child Development serves children affected by developmental and learning differences and their families. See www.childrenshospital.vanderbilt.org and search "Center for Child Development."

Monroe Carell Jr. Children's Hospital at Vanderbilt Health and Wellness Library

Search "ADHD."
www.childrenshospital.vanderbilt.org/library

Other Resources

STEP (Support and Training for Exceptional Parents)

Provides free information, advocacy training, and support services to parents of children who are eligible to receive special education services under the Individuals with Disabilities Education Act (IDEA) and who reside in Tennessee. (800) 280-STEP, www.tnstep.org

Tennessee Department of Education, Division of Special Education

The purpose is to "promote educational services and programs for all Tennessee's children with special education needs that will enable them to lead productive and independent lives." (888) 212-3162, www.tn.gov/education/speced/
