How does self control develop in children? We invite typically developing, right-handed children between 4 and 9 years old and their parents to be a part of our research.

Before the research visit:
• Call or email us.
• Answer some questions over the phone.
• Some families will be invited to come in for up to two visits.

During the research visit:
• Parents will answer questions about their child and family.
• Children will work with the researchers and do computer tasks that measure self control while wearing a damp stretchy cap that records electrical activity in the brain.

After the research visit:
• Your child receives a small toy
• You receive $10 per hour and mileage reimbursement

Study conducted by the Educational Cognitive Neuroscience Lab at Peabody College of Vanderbilt University
Researchers Bruce McCandliss, Ph.D., Hilda Fehd, Ph.D., Fengji Geng, B.A., and Ayzit Doydum, B.A.
