

Learning Healthcare System – Research Support Platform

A Learning Healthcare System (LHS) focuses on bringing clinical research and clinical operations together as collaborative partners. Evidence generated through carefully designed, rigorous study will help drive forward recommendations for best practices; and, critical issues that arise in the delivery of the highest-quality patient care will help define key questions to pursue.

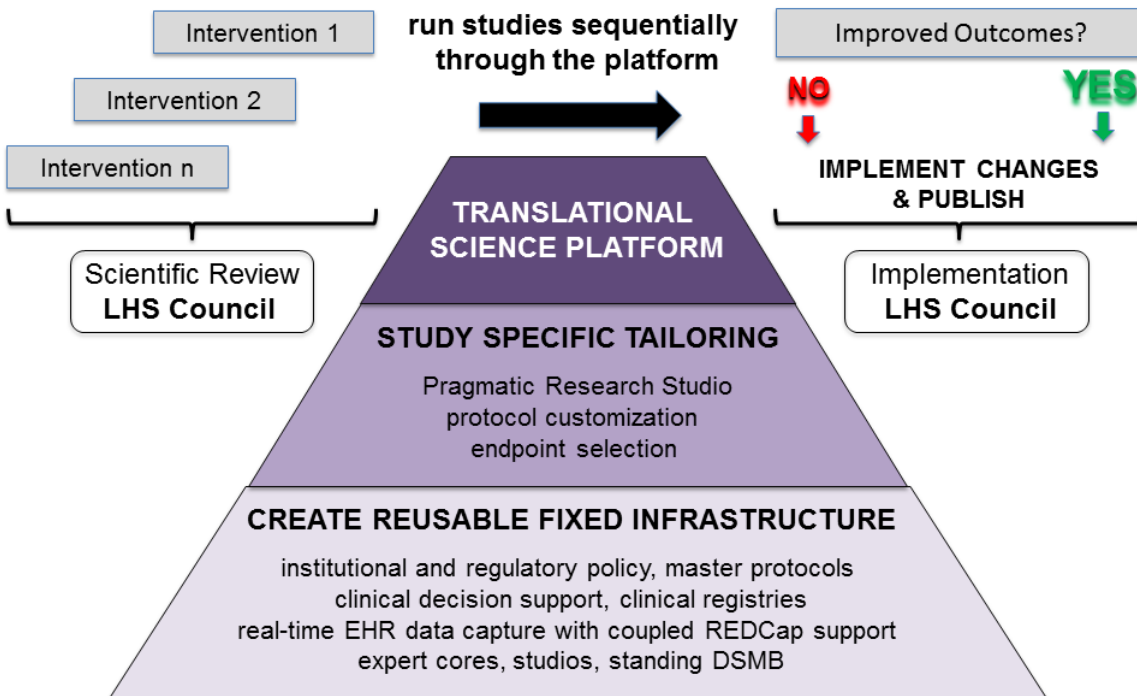

How can we advance Learning Healthcare at VUMC?

- promote, develop, and support ventures aligned with the mission of LHS
- ensure technical, procedural, and human infrastructure is in place for LHS evolution
- expedite efficient pursuit of activities improving the content, process, and quality of patient care

Most often involving: prospective, randomized, controlled, pragmatic clinical trials - embedding research within the context of routine care delivery with minimal resource addition

Vanderbilt Institute for Clinical and Translational Research Learning Healthcare System Platform

Leadership: Gordon Bernard, MD – Robert Dittus, MD, MPH – Jill Pulley, MBA
